PROJECT PRESENTATION

RATION STATUS

Project that help People and Government
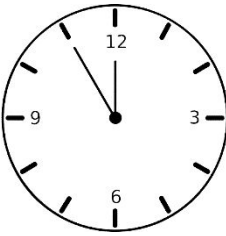

What's this project for?

Visual Depiction

- Shop entrance
- People crowd
- Grocery items

Problem Facing by People

Difficulties are ,

- People are not able to get exact information about **Opening/Closing time** of the Ration shop.

- So they either have to wait for long time to get grocery from the Shop or return to home.

- Due to **crowd** and **lack of information** on Closing time and availability almost half of the people return back to their home **empty handed** without buying grocery.

Solution

Digitally to solve this problem,

- We can use **Google Map API , Google Places API** to fetch Longitude and Latitude of user specific location and returning the exact required information to end user.

- Administrator will push the information to the user

Technologies used to solve this problem

This project build using **Android**

- Kotlin , Firebase
- MySql,
- Google Places API.
- Google Maps APL.

Result

This project will solve the problem,

- By saving the time of the people when they get to know the availability of the shop they cam manage their time.

- It will help to reduce the crowd so the stress among people and shop distributor will be reduced.

- **Reduction of Crowd** is the most crucial part in this **pandemic period** so this project will **aid the Government** to do so.
